

Specifications for Latex Shoe Covers

Material: Natural latex yellow. Shoe covers are case-hardened using a chlorinating process with the residual chlorine removed. (Chemical composition: *Natural Latex Rubber*; less than 1% each of the following processing aids: Sulfur, Zinc Oxide, Soxinol EZ, Soxinol TP and Antigene SP)

Design: The shoe covers are designed to fit either the left or right foot. They will stretch to fit most size shoes and have an acid roughened sole to aid in slip resistance.

Physical requirements:

Tensile strength	3800 psi min.
Elongation	750 % min.
Specific Gravity	.94 – 1.15
Thickness	.018” nominal, .016” min

Measurements: The shoe covers are 13” long and 6” high (+/- .5”)

Packaging: Normally packaged 100 pairs per box.

Part# GX1433
